Art Unit: 3764

Claims 7-10 are allowed.

Claims 5 is objected to as being dependent upon a rejected base claim, but would be allowable if rewritten in independent form including all of the limitations of the base claim and any intervening claims.

The following is a quotation of 35 U.S.C. 103(a) which forms the basis for all obviousness rejections set forth in this Office action:

(a) A patent may not be obtained though the invention is not identically disclosed or described as set forth in section 102 of this title, if the differences between the subject matter sought to be patented and the prior art are such that the subject matter as a whole would have been obvious at the time the invention was made to a person having ordinary skill in the art to which said subject matter pertains. Patentability shall not be negated by the manner in which the invention was made.

Claims 1,2,3,4 and 6 are rejected under 35 U.S.C. 103(a) as being unpatentable over Puranda fig 1 in view of fig 3.

Puranda discloses a device comprising a support plate (38) attaching means (42) in the form of bolts arms (48) a rotating means (52,58) and a bag (54) located on the ends of the arms.

Puranda however in fig 1 does not disclose his arm member as being rectangular

Fig 3 of Puranda however discloses a device having a cross bar member (62) having a rectangular cross section.

Given the teaching of manufacturing bar member having varied shaped cross section the examiner notes that it would have been obvious to one of the ordinary skill in the art to manufacturing the cross member bar assembly (48) as having a rectangular cross section.

In regard to claim 3, element 28 is considered as a rotating axle support and element (52) is a bearing member.

Art Unit: 3764

The prior art made of record and not relied upon is considered pertinent to applicant's disclosure. 1) Note the overall device of Noftsinger and Forrest.

Note the suspendable features of Schechner et al, and Moore et al
